STANDARDS & SPECIFICATIONS

Hi-Vis Performance Grade	Minimum Square Meter Required			Circumstances	Field of Work	Style
	Hi-Vis Material	Reflective Material	Combined Performance			
Class 1	0.14 m ²	0.1 m ²	0.2 m ²	For daytime use only, where vehicle speeds do not exceed 30km/h	Low Risk Environments (Warehouse, Maintenance, Distodians)	
Class 2	0.5 m ²	0.13 m ²		For day and night use, where vehicle speeds do not exceed 60km/h	Medium Risk Environments (Traffic Control, Construction Sites, Municipal Workers)	
Class 3	0.8 m ²	0.2 m ²		For day and night use, where vehicle speeds exceed 60km/h	High Risk Environments (Highway Patrol, Road Maintenance, Emergency Services)	

All safety wear are rated and approved by the American National Standards Institute (ANSI). Safety wear are classified as Class 1, Class 2 or Class 3 - based on the amount of both reflective material and high contrast fabric making up the apparel.

Our in-house printing department utilises specialised equipment to custom-design and print artwork to your specific needs, the graphic design team are available to assist you.

HTV - Cut

HTV is a type of polyurethane material with a heat-activated adhesive, typically polyester-based. It is designed to be used on certain fabrics and materials to apply branding to your safety wear.

HTV comes laminated together with a clear polyester backing, which allows it to be easily cut and weeded (removed) from the backing sheet.

HTV comes in single colour or multi-colours and also high quality silver reflective.

HTV - Printed

Printed Heat Transfer Vinyl (HTV) is a type of heat transfer material that allows for direct printing onto vinyl using our high quality large format printer. Unlike traditional HTV, which requires cutting and layering, Printed HTV eliminates the need for manual cutting and layering, making the process more efficient and convenient.

Printed HTV have a +/- 50 wash life cycle.

Embroidered Branding

Embroidery is the craft of branding fabric or other materials using a needle to apply thread or yarn. It involves creating designs, patterns, or images on a surface by stitching with a needle and thread.

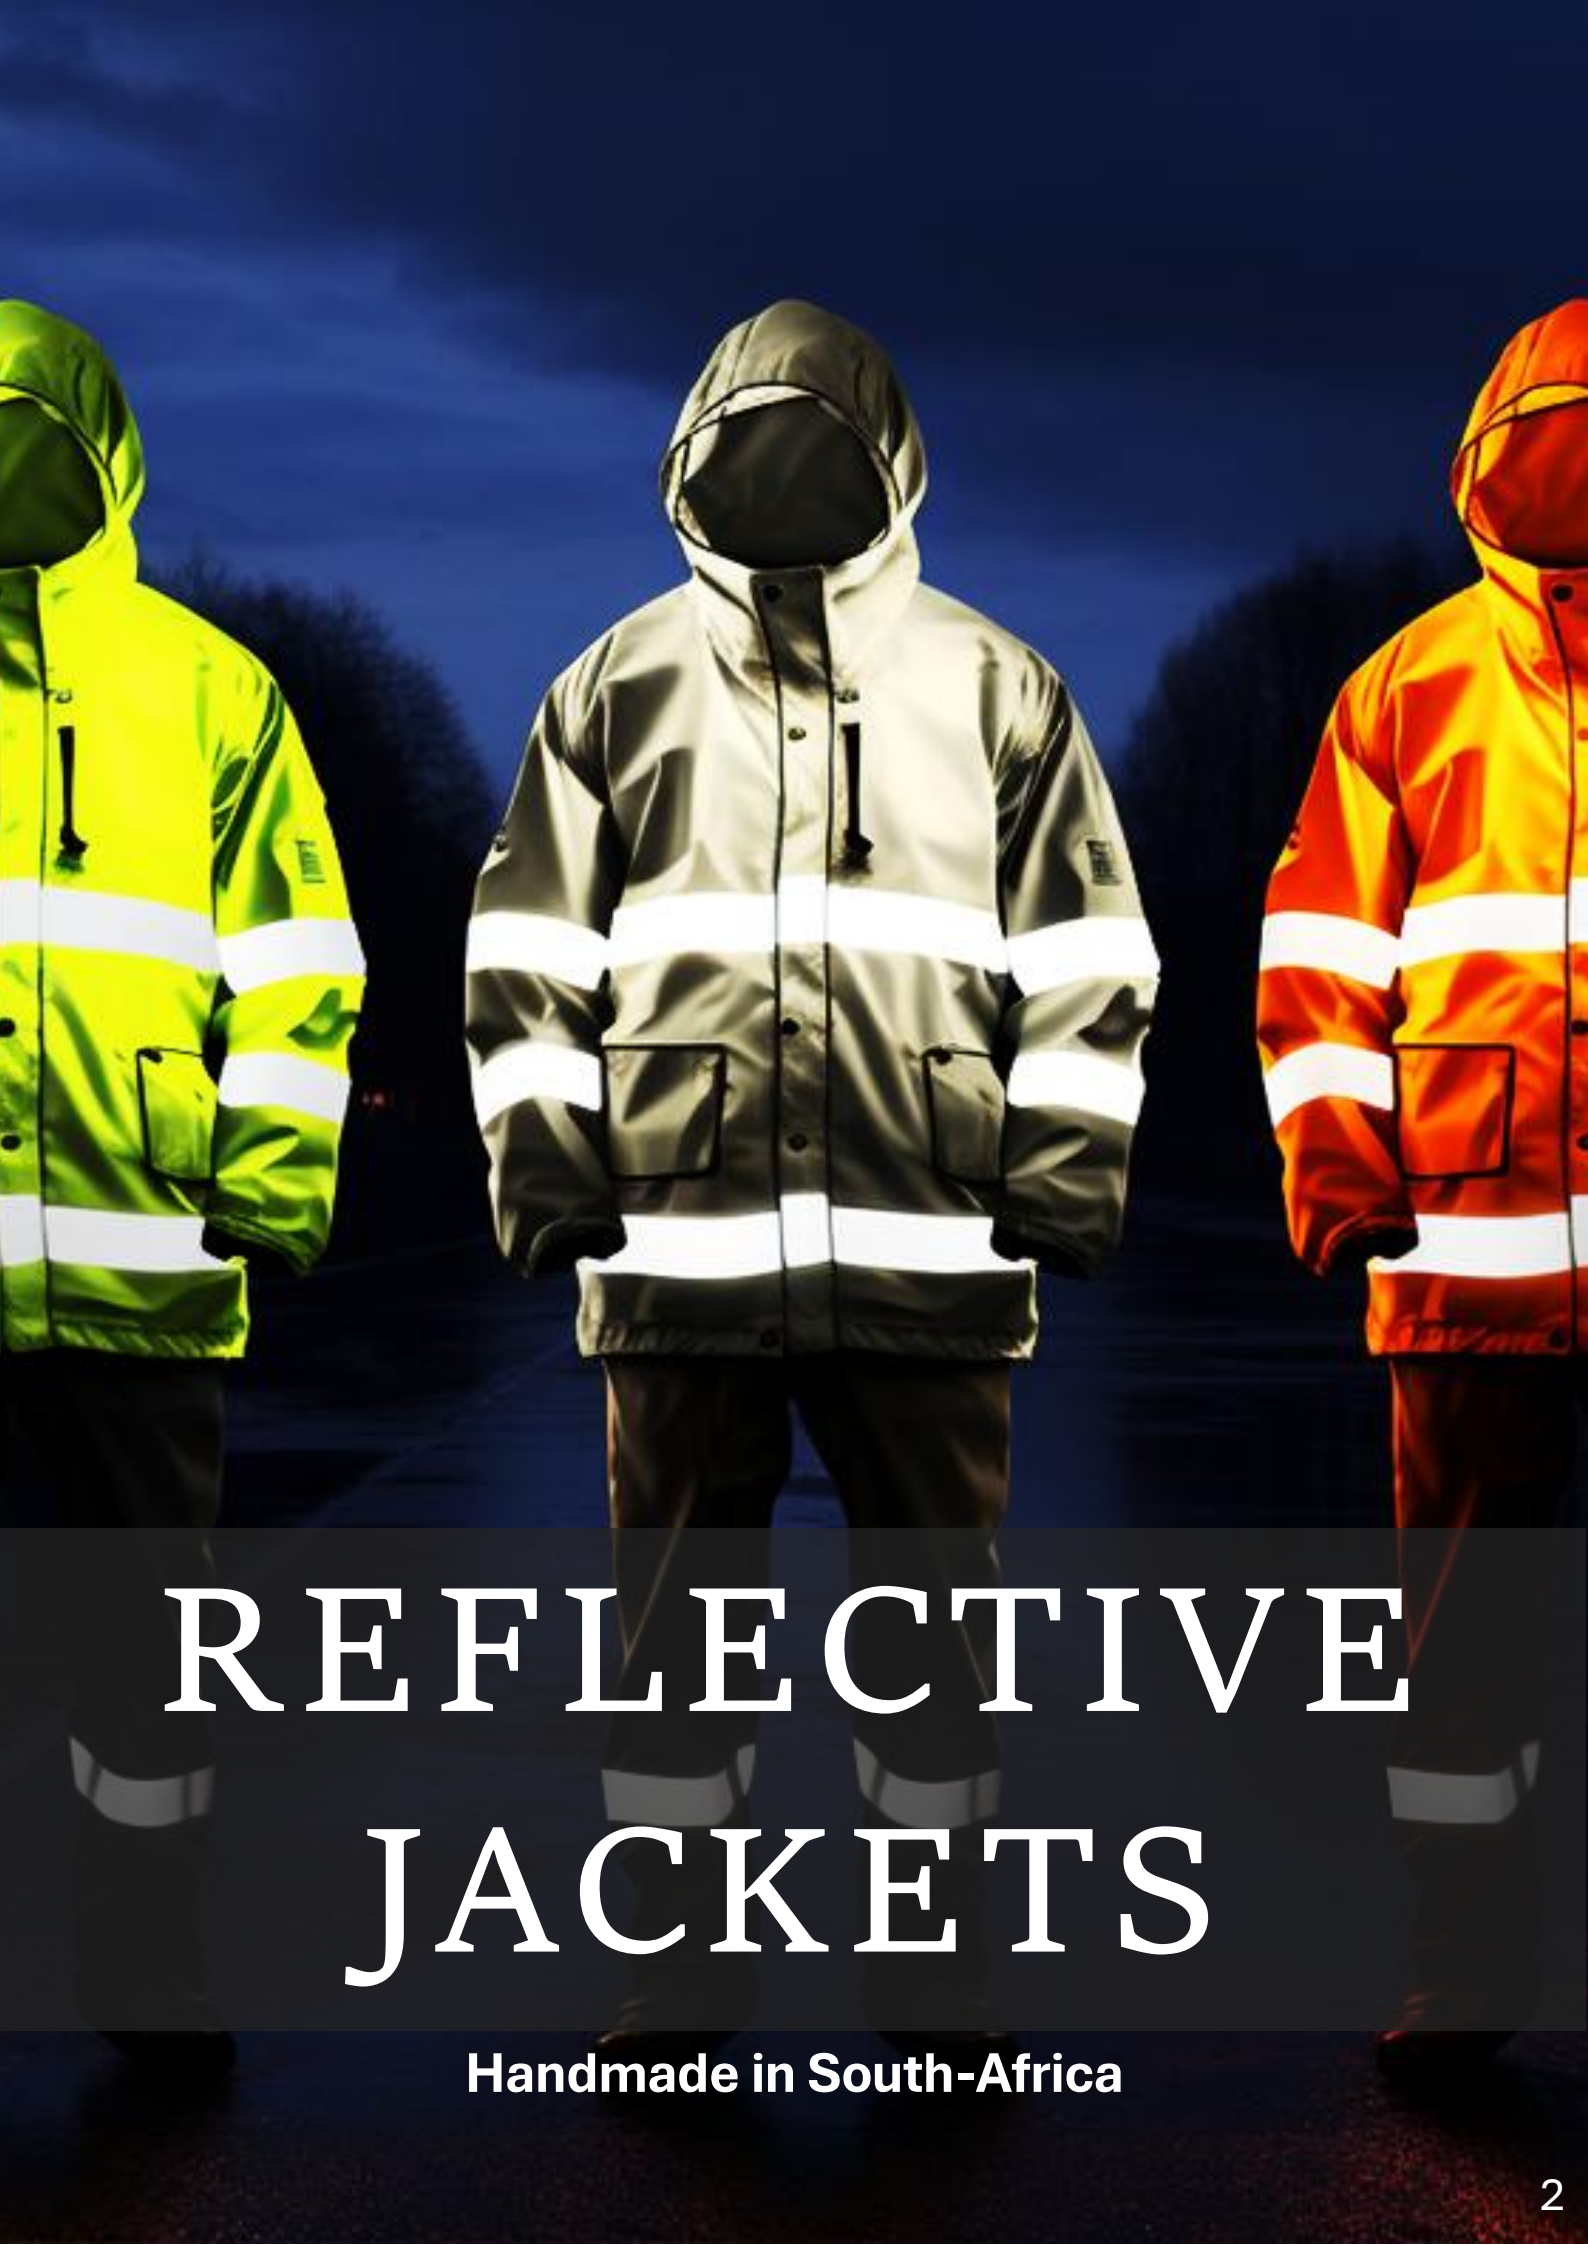

Doming

HTV is a type of polyurethane material with a heat-activated adhesive, typically polyester-based. It is designed to be used on certain fabrics and materials to apply branding to your safety wear.

HTV comes laminated together with a clear polyester backing, which allows it to be easily cut and weeded (removed) from the backing sheet.

HTV comes in single colour or multi-colours and also high quality silver reflective.

SUBLIMATED REFLECTIVE SCUBA JACKET

Scuba fabric is a double-knit fabric made primarily from a blend of polyester and spandex. It was originally inspired by neoprene, the material used for wetsuits, but it is lighter, stretchier, and more flexible. It offers some water-repelling capabilities but please note that it is not waterproof.

HARD HATS

When selecting head protection, understanding the difference between a standard hard hat and a domed hard hat ensures the right fit for the job.

HARD HAT

- Features a front brim for added protection from the sun & debris.
- Ideal for outdoor construction, general site work, and environments where falling objects are at risk.
- Compatible with accessories like face shields and earmuffs.
- Provides directional impact protection.

DOMED HARD HAT

- Smooth, rounded shape with little to no brim with branding.
- Best suited for confined or overhead spaces where snagging is a concern.
- Offers 360-degree protection around the head.
- Especially useful in underground, industrial & electrical workspaces.

ARTWORK ILLUSTRATION

We use mockups to give you a general idea of how the actual products look like. Mockups are digital representations of our products that display how the finished item would look like in real life. Although we strive to make these digital representations look like the real product as closely as possible, they are not 100% accurate. The size and specific placement of the designs on the final product may not be exactly the same as shown on the digital picture. The cut and fit of the clothing may also differ in the mockups. Additionally, due to settings on your device's monitor and the digital printing technology, colors may appear slightly different on the actual product than the mockups.
